FACTORY FACILITIES

BASE DESIGNS ROOM

In the cap making room, our team will use the template to produce a Foam mold. The Foam mold is used to draw the design of the cap according to the customer's request and will be stored at the factory for the following orders. Since it is a custom item, each order will have a different Foam mold, each foam mold is unique. After creating the Foam mold, our technician will draw in the design, select the materials and cut and saw in the next steps to create the most accurate base design.

FACTORY FACILITIES

HAIR MAKING ROOM

In the hair room, the technicians will select hair types from different raw materials depending on the customer's requirements such as hair length, color and density of hair to complete the order. Light colors (from Level 6), ombres or highlights with lots of color takes more time to manufacture in this step.

FACTORY FACILITIES

INSPECTION ROOM

This is the start and end area for the product before shipping to the customer.

All supplies will be prepared here and taken to different branches to perform ventilation. Also here, the final product will be checked for quality and fixed if necessary before being packaged.
